

# HOL104 – SAP SuccessFactors Learning User Generated Content: Enabling your users to Share their Expertise using Collections.

Robert Call, SAP  
October 2, 2023

# Agenda

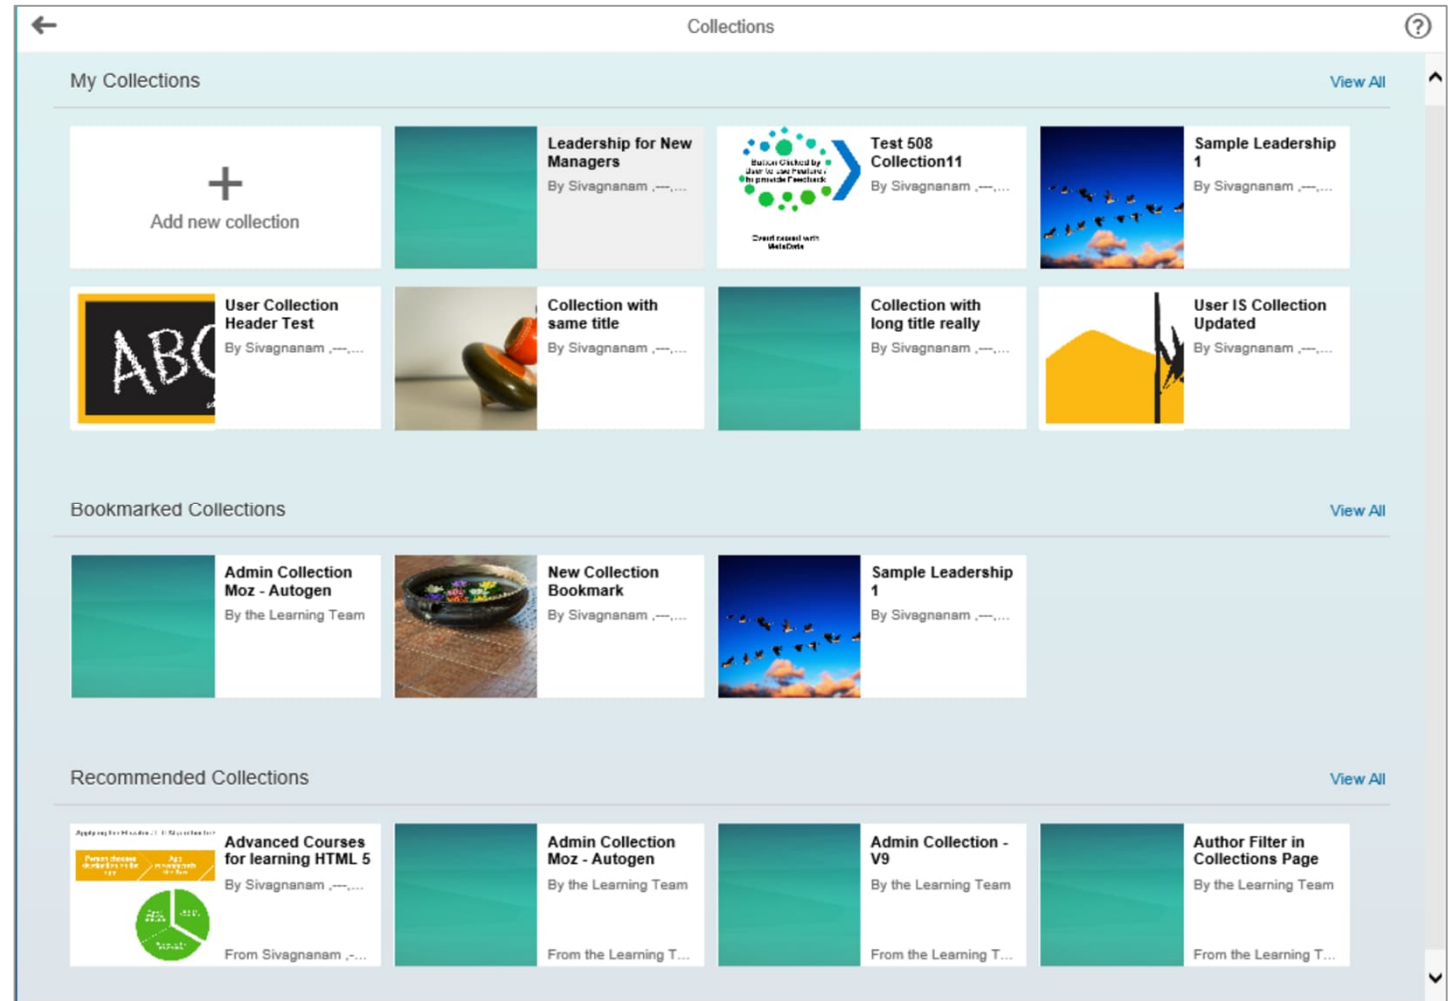

- Collections – Overview
- Assignment Profiles
- Libraries
- Lab Activities
- Q&A

# Understanding Collections

A collection is a list of links, online items, and programs created by either an Administrator or a user.

When Administrators create collections, they may recommend them to users through an assignment profile (AP).

When users create a collection, they may also add Quick Guides to it, publish it to a library and recommend it to their peers.

# Assignment Profiles

- Assignment Profiles (APs) allow organizations to automate the assignment learning content to groups of users who share common learning needs
- They provide the ability to specify assignment rules for learning assignments
- In addition to the assignment rules, the profiles allow you to specify what learning content you want the profile to assign to users (i.e. – Items, Curricula, Libraries, etc.).
- The real benefit comes from the options you have in defining the desired Assignment Rules, plus the Related learning content that can be assigned through the profile itself

## Assignment Profiles can assign the following entities:

- Libraries
- Curricula
- Items
- Programs
- Recommendations
- User Role

The screenshot shows a web-based configuration window titled "My Assignment Profile". It is divided into two main sections: "Set up Domains" and "Set up Rules".

**Set up Domains:** This section includes a description: "Specify the domains and subdomains that the users are associated with. Only users in these domains receive the assignments you make. The domains selected will apply to all groups of users selected through the Assignment Rules." Below this, there is a list of domains. "LMS Top (Root) Domain" is selected, and the "Include Subdomains" checkbox is checked. An "Add Domain(s)" button is in the top right corner.

**Set up Rules:** This section includes a description: "Users will be part of the profile if they have attribute values that match all of the rules defined within at least one group." Below this, there is a list of rules. A rule named "Hire Rule" is selected. The rule configuration shows "Hire Date" as the attribute, "On or After" as the operator, and "1/1/2014" as the value. Buttons for "Add Rule", "Undo", "Save", "Cancel", "Preview Users in Assignment Profile", and "Advanced User Search" are visible at the bottom.

# Lab Activities

# Lab Activities

## Scenario:

Today we'll be enabling learners in the company the ability to create and share content through the use of "Collections". We'll also explore how administrators can create controls to help manage who can create content through the use of Assignment Profiles and Libraries.

- Creating Controls for User-defined Content
  - Role change based on Assignment Profile
  - Creating a dedicated library for all published collections
- Creating a Collection as a User
- Managing Collections as an Administrator
- Understanding Libraries
- Collection Reports

# Assignment Profile – Role Change

Role ID: DEFAULT USER

Description: System Default User Role

Summary

Permissions

Entity Restr.
